

Inventory Summary

PWS Name: Rye Water District

PWSID: 2041010

Enter Date Last Updated: 10/29/25

Purpose of this worksheet: For water systems to provide a summary of their service line inventory, including information on ownership, inventory format, and the number of service lines for each of the four required materials classifications.

Part 1. General Information

1a. Who owns the service lines in your system? If other, please explain below.	Ownership is split: meaning the system owns a portion and the customer owns a portion
1b. Is there documentation that defines service line ownership in your system, such as a local ordinance? If yes, please describe below and explain where ownership is split (e.g., property line, curb stop).	Yes Utility owns the service line up until curb stop, customer owns from curb stop to house
2a. Describe when lead service lines were generally installed in your system.	Lead service lines were not installed in the system
2b. When were lead service lines banned in your system? Reference the state (1989) or local ordinance that banned the use of lead in your system.	1986
3. Do you have lead goosenecks, pigtails or connectors in your system?	No
4. What is your overall level of confidence in the inventory (i.e., "Low," "Medium," or "High.") Please explain your rationale below.	High due to extensive record reviews from multiple sources (tie cards, work orders, water main replacements, service line replacements, etc.)

Part 2. Inventory Summary Table¹

This table will auto-populate.

In the **Detailed Inventory** worksheet, the classifications given to you in the Column "Entire Service Line Material Classification" (Column AB) will be used to calculate the total number of service lines for each of the four material classifications below.

Service Line Material Classification	Definition	Total Number of Service Lines (REQUIRED to be reported under the LCRR)
Lead	Any portion of the service line is known to be made of lead. ²	0
Galvanized Requiring Replacement (GRR)	The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line/connector.	1
Non-Lead	All portions of the service line are known NOT to be lead or GRR through an evidence-based record, method, or technique.	1,809
Lead Status Unknown	The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.	2
TOTAL		1,812

Notes

¹ This summary table is for reporting material for the entire service line connecting the water main to the customer's plumbing. See the **Classifying SLs** worksheet for additional guidance on assigning a materials classification to the entire service line when ownership is split. Remember that systems must track the system-owned and customer-owned portions separately in their inventory.

² A lead-lined galvanized service line is consistent with the definition of an LSL under the LCRR ("a portion of pipe that is made of lead, which connects the water main to the building inlet") (40 CFR §141.2) and must therefore be classified in the inventory as an LSL.

Part 3. Connector and Replacement Summary Table¹

This table will auto-populate.

In the **Detailed Inventory** worksheet, the lead connector (column AD) and service line replacement (column AL and AN) information will be added up and summarized below per LCRI requirements.

Connectors and Replacements	Definition	Total Number (REQUIRED to be reported under LCRI)
Lead Connectors	Lead connectors are present on a service line.	0
Unknown Connectors	Connectors are present on a service line, but the material of that connector cannot be classified.	188
Lead/GRR Partial Replacements	A partial service line (from main to curb <u>or</u> from curb to inside of the structure) containing lead/GRR has been replaced with a non-lead service line material.	0
Lead/GRR Full Replacements	A full service line (from main to the inside of the structure) containing lead/GRR has been replaced with a non-lead service line material.	1

Notes

¹This summary table is for reporting the total number of lead connectors and the full and partial service line replacements to the Environmental Protection Agency (EPA).
