

Inventory Summary

PWS Name: Rye Water District

PWSID: 2041010

Enter Date Last Updated: **10/09/24**

Purpose of this worksheet: For water systems to provide a summary of their service line inventory, including information on ownership, inventory format, and the number of service lines for each of the four required materials classifications.

Part 1. General Information

1. Is this the Initial Inventory or an Inventory Update ?	<i>Initial Inventory</i>
2a. Who owns the service lines in your system? <i>If other, please explain below.</i>	<i>Ownership is split: meaning the system owns a portion and the customer owns a portion</i>
2b. Is there documentation that defines service line ownership in your system, such as a local ordinance? <i>If yes, please describe below and explain where ownership is split (e.g., property line, curb stop).</i>	Yes
Utility owns the service line up until curb stop, customer owns from curb stop to house	
3a. Describe when lead service lines were generally installed in your system.	Lead service lines were not installed in the system
3b. When were lead service lines banned in your system? Reference the state or local ordinance that banned the use of lead in your system.	1986
4. Do you have lead goosenecks, pigtails or connectors in your system?	<i>No</i>
5. What is your overall level of confidence in the inventory (i.e., "Low," "Medium," or "High.") Please explain your rationale below.	High due to extensive record reviews from multiple sources (tie cards, work orders, water main replacements, service line replacements, etc.)

Part 2. Inventory Summary Table ¹

This table will auto-populate. In the **Detailed Inventory** worksheet, the classifications given to you in the Column "Entire Service Line Material Classification" (Column AB) will be used to calculate the total number of service lines for each of the four material classifications below.

Service Line Material Classification	Definition	Total Number of Service Lines (REQUIRED to be reported under the LCRR)
Lead	Any portion of the service line is known to be made of lead. ²	0
Galvanized Requiring Replacement (GRR)	The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line.	1
Non-Lead	All portions of the service line are known NOT to be lead or GRR through an evidence-based record, method, or technique.	1,584
Lead Status Unknown	The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.	211
TOTAL		1,796

Notes

¹ This summary table is for reporting material for the entire service line connecting the water main to the customer's plumbing. See the **Classifying SLs** worksheet for additional guidance on assigning a materials classification to the entire service line when ownership is split. Remember that systems must track the system-owned and customer-owned portions separately in their inventory.

² A lead-lined galvanized service line is consistent with the definition of an LSL under the LCRR ("a portion of pipe that is made of lead, which connects the water main to the building inlet") (40 CFR §141.2) and must therefore be classified in the inventory as an LSL. Do NOT, however, count non-lead service lines with a lead gooseneck or pigtail as lead service lines unless required by NHDES.
